Potential competing interests: No potential competing interests to declare.

The paper is well written and its content is easy to follow, however, it has some limitations in terms of novelty, experimental results and contribution in general.

1. Rephrase the abstract to keep it in the order of introduction, methodology(design) and conclusions.
2. increase some literature review
3. Include more details on the design and fabrication for a better overview.
4. Good to provide some details on the future work.
5. How did you select the propeller? Have you worked on the hydrodynamic part of ROV?
6. Provide experimental data.
