

Review of: "A Study for Estimation of Greenhouse Gas Emissions of Cotton in Central Greece"

Elchin Suleymanov¹

¹ Baku Engineering University

Potential competing interests: The study identifies key issues regarding environmental factors for the sustainable development and investment goals. Some specific issues should be improved. The description of the study context/importance of the study is relatively good, the study methods and data are clearly described, and the results are summarised in an acceptable manner. 1. The abstract part should be improved. The main reason of selecting this topic should be given at the beginning of this part. 2. More strategies should be given at the end of the abstract part based on the analysis results. 3. The contributions of this study should be explained at the end of the introduction part in a more detailed manner. 4. The contribution of the manuscript should be explained more in the conclusion. 5. More information should be given about the limitations and future Research directions in the conclusion part. 6. I suggest minor English language editing and avoiding long complex sentences that go apart from main idea. 7. After minor revisions, the manuscript is acceptable

Significant Issues After Reviewing the Manuscript

The study identifies key issues regarding environmental factors for the sustainable development and investment goals. Some specific issues should be improved. The description of the study context/importance of the study is relatively good, the study methods and data are clearly described, and the results are summarised in an acceptable manner.

1. The abstract part should be improved. The main reason of selecting this topic should be given at the beginning of this part.
2. More strategies should be given at the end of the abstract part based on the analysis results.
3. The contributions of this study should be explained at the end of the introduction part in a more detailed manner.
4. The contribution of the manuscript should be explained more in the conclusion.
5. More information should be given about the limitations and future Research directions in the conclusion part.
6. I suggest minor English language editing and avoiding long complex sentences that go apart from main idea.
7. After minor revisions, the manuscript is acceptable

The study identifies key issues regarding environmental factors for the sustainable development and investment goals. Some specific issues should be improved. The description of the study context/importance of the study is relatively good, the study methods and data are clearly described, and the results are summarised in an acceptable manner.

1. The abstract part should be improved. The main reason of selecting this topic should be given at the beginning of this part.
2. More strategies should be given at the end of the abstract part based on the analysis results.

3. The contributions of this study should be explained at the end of the introduction part in a more detailed manner.
4. The contribution of the manuscript should be explained more in the conclusion.
5. More information should be given about the limitations and future Research directions in the conclusion part.
6. I suggest minor English language editing and avoiding long complex sentences that go apart from main idea.
7. After minor revisions, the manuscript is acceptable
