Potential competing interests: No potential competing interests to declare.

The article on *Acacia pycnantha* gum, entitled “*Acacia pycnantha* gum exudates recognised as a traditional food in two countries, may have economic potential,” is interesting. However, it could be more informative and useful with additional details on the chemical compounds, nutrition, and processing for human consumption. Expanding on these aspects would make the article more informative and valuable for readers interested in the potential use of this gum as a cost-effective food source.
