

Review of: "Exploring the Link between Climate Change and Farming in Rural and Peri-Urban Communities in Sierra Leone"

Ahmed K. Al-Delaimy¹

¹ University of Anbar

Potential competing interests: No potential competing interests to declare.

The manuscript needs more statistical links between different variables (correlation, regression, association) because the title is written as "link," so the manuscript also needs to interpret this link. The author can use a chi-square test.

No details are provided about the type of fertilizer used in farms, and the reason given is only for pests.

The conclusion is full of repeated research questions; consider canceling it. The author repeated that he took past years, so can the paper be considered a review paper?

No details are provided about the effect of climate change on animals.
