Having read the paper Evaluating Hydrologic, Geomorphic, and Vegetation Parameters to Assess Natural, Living, and Hardened Shorelines along the Northern Gulf of Mexico, it seems to me that a lot of effort was put into this work and some very important data was obtained. Regarding the comments, I think it is important to mention the possible effects of hurricanes on the hardened and living shorelines, with respect to sedimentation and/or erosion, since this is an area frequently affected by these events.
