Dear authors,

First of all, I appreciate this valuable effort you have been put in this interesting topic. I hope my views could help you to improve this manuscript.

I would like to say there are two major issues about this manuscript. Firstly, the texts and figures are too casual and confusing to understand. It's more like a geographic blog instead of a scientific paper. I would politely ask you to put much more efforts on this part, to let readers understand your scientific points well.

Additionally, the contents in the main chapters, such as abstract and conclusions, can not fit well in a logical way. Your aims and conclusions are not been presented in the manuscript properly. I would like to get more objective results and conclusions in the main text instead of the geographic materials and basic descriptive paragraphs.

There are still other scientific problems needed to be addressed and clarified clearly. But I would like to suggest the authors fix the major issues at the first place so that reviewers could get scientific points precisely.
