

# Review of: "Nutritional Status and Dietary Patterns of Children Aged Ten Years and Below In the Buea Municipality, South West Region Cameroon"

Opeoluwa Oyedele

Potential competing interests: No potential competing interests to declare.

The purpose of this study was to assess the relationship between dietary patterns and nutritional status among children aged ten years and below in the Buea Health District. Below are a few comments and concerns for consideration in revising the work:

1. The English language should be improved throughout the manuscript as some parts were not well written.
2. The last part of the Abstract needs to be rewritten properly.
3. The result section needs to be presented & realigned properly, especially the regression analysis interpretation parts.
4. Rather list out the identified socio-economic factors per each of the 3 nutrition status levels (Table 3) in your conclusion, especially when several factors affected different level(s) of nutrition as revealed in your result section.
5. Limitations or strengths & weaknesses section of the study are missing.
6. Recommendation section needs to be rewritten properly.

Thus, the authors need to put more focus on the above so that the manuscript comes out appropriately.
