MMP1 wt Allele

National Cancer Institute

Source

National Cancer Institute. *MMP1 wt Allele*. NCI Thesaurus. Code C49731.

Human MMP1 wild-type allele is located in the vicinity of 11q22.3 and is approximately 8 kb in length. This allele, which encodes interstitial collagenase protein, is involved in the breakdown of the extracellular matrix via the degradation of interstitial collagens (types I, II and III). The MMP1 gene is associated with neoplasm invasiveness.
