Review of: "Sentiment Analysis of Opinions about Online Education in the Kurdistan Region of Iraq during COVID-19"

Ibrahim Nasir Mahmood

Potential competing interests: No potential competing interests to declare.

The topic of the article is very interesting and important to get an overview about the experience of enforced online learning during COVID-19. I would suggest the following to improve the paper more:

1- The language of the paper needs to be revised more to reach to more connected ideas. Especially, in terms of punctuations and sentence connecting.

2- Sentiment analysis was used in this research, therefore; more details need to be added about Sentiment analysis.

3- Please, Elaborate more about the machine learning algorithms used in this paper. It is better to describe the working mechanism of each algorithm (Naïve Bayes, Support Vector Machine (SMV), Logistic Regression and Random Forest).

4- The concluded results are not quite clear. It is better to mention in which terms the accuracy was achieved. I would suggest to organize the results in a form of table which makes it more readable and understandable.

Please, take a look at my paper which is related to your topic
