Potential competing interests: No potential competing interests to declare.

Major revision required.

Comments:

1. Research gap of the study is not clearly mentioned. Why is there a need for establishing any relationship between risk perception of economic risk and other risks? Also, why the researcher has considered only road risk and share market risk is not explained properly.
2. Sample size considered is too small to generalize the results. The researcher has not mentioned clearly the population size or the sampling design/techniques in this study.
3. Analyses have been performed using different combinations to check the relationship between risk perception and different factors, but why and how these combinations were made is not mentioned.
4. The researcher fails to identify the proper objective as well as the practical implications of the study.
