

Review of: "Design of an intelligent controller for improving the solar system efficiency"

Vasantharaj S

Potential competing interests: No potential competing interests to declare.

The title suggests a focus on the efficiency of the solar system; however, the paper lacks concrete results pertaining to solar system efficiency. Furthermore, the concepts presented in the paper are already well-established, lacking novelty. Therefore, I recommend rejecting this paper.

Suggestions to author:

1. Fuzzy images are not clear.
2. Kindly include the experimental validation
3. Mention the comparison table
4. Include a recent MPPT algorithm for improving solar system efficiency.
