## Review

Determinants of Women Entrepreneurs' Business Performance: Evidence from Micro and Small-Scale Enterprises in Arba Minch Town, Southern Ethiopia

Dear Author(s), I have completed reviewing this paper which needs minor revisions before considering for publication.

## Abstract

- The major implication of the findings is required to be mentioned.

## Introduction

- Review of hypotheses could not clarify the outcome variable of the study: business performance, performance of women entrepreneurs, or SMEs performance.
- Exclude hypotheses from introduction section.
- The author(s) are required to strengthen the background of the study. The motivation and theoretical contention are completely missing.

## Literature Review

- Intext citations are not as per APA. See for instance (Vossenberg, 2013), (Zinash (2014); (Jemal, 2013), and (Getu, 2015) (Kanbiro et al., 2018).

## Research Methodology

- In Table 3.3, the author(s) should write "Likert scale" in the column of the scale of measurement instead of "continuous".

## Empirical Finding and Discussion

- The Table 4.2 is not as per APA style.
- Did author(s) check the normality of data? If so report its results.
- Results are not supported by relevant literature.

- Results are also not matched with hypothesized relationships.
- The values of F statistics and R square are not reported.

### **Conclusion**

- Author(s) are required to support the findings with pertinent theories.

### **Implications**

- Add theoretical and practical implications of the study

### **References**

The references mentioned in reference list are not as per APA style.

**Note:** The whole article needs thorough round of proof reading. Moreover, cite latest references to support your arguments.
