Dear Authors,

I have read the manuscript with interest, and here are a few comments that may help to strengthen the manuscript:

1. Consider providing the full search strings.
2. The methodology is appropriate.
3. Coulrophobia could depend on the place where it is evaluated. Please specify the country of the studies that reported the prevalence.
4. In the results, you talk about a severe form of coulrophobia. Please define the classification of the severity of coulrophobia.
5. You can suggest guidelines for future research.
