Potential competing interests: No potential competing interests to declare.

The research paper topic should be changed to "The Evaluation of the mechanical properties of plastic sandcrete in Cameroon using PET and PP".

The abstract should be re-written to include the optimum results, design mix of sandcrete used, how samples were prepared, the total number of samples produced, and curing durations. It should be written in three paragraphs, not more than five hundred words.

In the materials and methodology section, proper references to literature or standards should be made to explain why certain actions were carried out. Clarity should be provided on the total numbers of samples produced from each percentage of replacements, and also the design mix of the control sandcrete used.

In the results and discussion section, graphs should be properly explained, and results should be compared to standards or past literature. More discussion of your work is needed. More so, you can add regression models to this research to make it more robust.
