Thank you for the opportunity to review this manuscript. I would like to offer several suggestions to enhance the overall professionalism and comprehensibility of the study:

1. I kindly provide a clear and concise explanation of the inclusion and exclusion criteria employed in your study. This information is crucial for readers to understand the characteristics of the participant group.
2. The study was conducted in October 2021. This temporal context can be vital for readers to appreciate the relevance and timeliness of the findings in the context of the evolving COVID-19 situation. Is it possible to add a chapter in discussion regarding this issue?
3. Table 4 presents valuable data, yet its findings are not discussed in the main text. I recommend adding a few sentences in the discussion section to elaborate on the significance and implications of the results presented in Table 4.
4. It would be beneficial to include a section in your manuscript that explicitly addresses both the limitations and strengths of the current study. This will provide readers with a more comprehensive understanding of the study's scope and reliability.
