Clomipramine

National Cancer Institute

Source

National Cancer Institute. *Clomipramine*. NCI Thesaurus. Code C61608.

A tricyclic antidepressant that acts by reducing the re-uptake of norepinephrine and serotonin in the central nervous system, thereby enhancing the effects of these neurotransmitters. This drug also binds to alpha-adrenergic, histaminergic, and cholinergic receptors which are responsible for the many side effects seen with this agent.
