# Log10 50 Percent Embryo Infective Dose

National Cancer Institute

## Source

National Cancer Institute. *Log10 50 Percent Embryo Infective Dose*. NCI Thesaurus. Code C70479.

A potency unit for measuring infectious activity of a biologic product or infectious agent equal to a base-10 logarithm of amount of product or agent preparation that causes infection in the 50% of embryos (such as chicken embryos) used in the product potency assay or pathogen activity assay.
