

# Review of: "The Complexity of Leaving No One Behind: Unmasking and Emphasizing Multiple and Intersectional Marginalisation in India"

Shivendu Singh

Potential competing interests: No potential competing interests to declare.

Sustainable Development Goals (SDG)-10 aims for progressively reducing not only income inequalities but also inequalities of outcome by ensuring access to equal opportunities and promoting social, economic and political inclusion of all, irrespective of age, sex, disability, race, ethnicity, religion or another status relevant within society. The topic is quite relevant in this context of the Inclusion & exclusion of marginalized groups and places due to certain advantaged and disadvantaged settings. The analysis of the spatial aspects/factors of computational methods in social science is also the current trend in the research (Wang & Liu, 2023).

Intersectionality of the spatial dimension and socio-economics is important to be analysed from the policymakers and governance point of view. The present research discourse tends to discuss the aforesaid facets, but there are considerations with the present manuscript, so minor and major considerations are warranted

## Abstract

How does spatial marginalization traverse with ecological marginalisation? What ecological dimensions or variables you have used for analysis in the study?

*If not used in the study, remove this in the abstract.*

## Introduction

### **Minor consideration required**

- Please check the citation (Nations, 2017), it should be United Nations or UN.
- The full stop (.) should be after the citation bracket.
- Please check the spelling mistakes in the section: "**Revisiting intersecting margins**".
- What is 'arginalizedon'....'arginalized' ? Please check the word used.
- 'scially; mostarginalizedd; disadvantagedarginalizedd.

### **Major consideration required**

- I would suggest presenting the dimensions, indicators and variables used in measuring the Multidimensional Poverty Index (MPI) study schematically or tabulated manner. Please describe the units of the variables used for the reader's

convenience.

- Write a paragraph at the end of the introduction, which briefs the objective of the research precisely followed by the structure of the whole paper.

### **Data and Methodology**

- Please discuss the source of data (spatial or non-spatial data) for mapping.
- A qualitative description is not sufficient. Why the spatial autocorrelation analysis is not used to describe the clustering of the districts? Spatial autoregression will quantify the degree to which similar districts are clustered.
- Please mention the gaps and the author's contribution to the existing literature.
