Thank you for this interesting article. The thesis of this article is very meaningful. However, there are three points I'd like to point out that may improve it.

First, you have a very clear abstract but inconsistent introduction. When I read the introduction after the abstract, it seemed slightly different from what the abstract had told me. You may want to start first with the significance of the longevity of EV and how technological advancement influences it. And you need to point out the gap your thesis wants to fill.

Second, relevant to the first point, you need to first provide some explanations about the longevity of EV. So that your reader can understand better, okay, your article is about the longevity of EV operations and not about a more general sense of the technology adoption.

Thirdly, within every point you addressed, you may need to articulate clearly the relations between longevity and that particular point. For instance, I didn't recall you've mentioned it in the charging system part.
