# Brassicasterol

National Cancer Institute

## Source

National Cancer Institute. *Brassicasterol*. NCI Thesaurus. Code C68325.

A steroid derivative characterized by the hydroxyl group in position C-3 of the steroid skeleton, elimination of carbon 24.2 of the alkyl substituent, and unsaturated bonds in position 5-6 of the B ring, and position 22-23 in the alkyl substituent. It is synthesized by several unicellular algae and some terrestrial plants.
