Potential competing interests: No potential competing interests to declare.

The article is well written, accompanied by a fairly complete and up-to-date bibliography.

The topics covered are interesting, and the review of the articles consulted could provide current research insights, particularly the discussion of sustainable and ecofriendly methods.

The construction of the paragraphs, however, is confusing and leads to repetitions of concepts.

For example, paragraph 3 (shelf life) should be inserted after the introduction. Paragraph 2 should be moved, limiting it to a description of the different crop varieties. The treatments paragraph should be sharply divided into two paragraphs.

The first should deal with traditional methods, and the second should explore innovative, sustainable, and ecofriendly methods (this should be expanded to bring curiosity toward the article).

Publication after minor review is recommended.
