Dear sir,

Greetings,

First of all congratulations on doing a most needed study. In the area of Accessibility for persons with disabilities very less studies are available in India. Your team made a good effort to explore the present status of hospital accessibility.

I request you to consider the following point in your report,

1. Maintaining the confidentiality of the data is one of the main ethical considerations in research studies. It is preferable to present the outcome of the data without mentioning the name of the respondents (Name of the Hospitals). You may state that Hospital in numbers 1,2,3 and so on.

All the best for your good work.

Thanks with regards,

Tagore Govindarajan
