

# Review of: "Biological Components in Cucumbers (*Cucumis Sativus* L.): Implications for Pickle Manufacturing and Health Benefits in Fresh and Processed Varieties"

Michele Caputo

Potential competing interests: No potential competing interests to declare.

Congratulations on the work,

This work talks about the implications for cucumber processing and the benefits for health.

However, the following aspects need to be improved:

The literature is very old; the most recent article is from 2020.

Table 1 is unclear, disordered, chaotic. It is necessary to support it by separating the elements well graphically.

Finally, the name *Cucumis Sativus* L. isn't in italics.
