Potential competing interests: No potential competing interests to declare.

This study investigates the status of women's entrepreneurship in the Bodoland Territorial Region (BTR) of Assam, India. The study is based on a questionnaire of 5000 samples. Based on the results of the questionnaire, the author provides several recommendations.

The following are suggestions for improvements to this article:

1. Writing aspect

- The literature used as a reference must be written clearly.
- Survey results written in long narrative form are inefficient. It would be better if the results were visualized in pictures or tables.

2. Methodology

- To ensure the validity of the data, it is necessary to carry out statistical tests such as data adequacy, normality, reliability, and validity tests. Conclusions can only be drawn from valid and reliable data.

3. Recommendations Section

- The author needs to explain how the recommendations are prepared.
- Cross-tabulation analysis may investigate the correlation between current conditions and the strategies needed to improve the entrepreneurial conditions under study.
- It would be more useful if the study is further carried out to determine the priority of the recommendations. The author can consider using multiple linear regression analysis.

4 Recommendations

- Authors(s) should describe the theoretical and practical implications of the results of this study.
- This study will be even more interesting if it is linked to the global issue of sustainable development goals. Many aspects can be discussed, such as poverty, gender equality, industry, economic growth, etc.
