Thanks you for a revised submission. The paper looks much improved and adds some important insights on building design parameters for the safety of individuals with autism spectrum disorder. The authors made a commendable effort in investigating on this topic through an overview of case examples from secondary research perspectives mainly from Australia. A justification on why Australia only could further improve the significance of the paper I think. The authors may also consider updating the references in this article. I look forward to read a revised submission (if any) in future. Best wishes.
