- Thank you for the opportunity to review this article.
- Very well written article.
- Of definite potential importance with need for more studies and trials to be undertaken for proving a definitive role for administration of high intravenous doses of Ascorbic Acid in hematological malignancies.
- The authors have discussed potential benefits and adverse effects and also suggested the role of future trials with respect to synergistic effect with immunotherapies, comparison of results in patients with varying mutational landscape etc.
- Extensively referenced with recent articles.
- Few language corrections are suggested (Supplementary file in word uploaded).
