Interferon-Induced Protein with Tetratricopeptide Repeats Family

National Cancer Institute

Source

National Cancer Institute. *Interferon-Induced Protein with Tetratricopeptide Repeats Family*. NCI Thesaurus. Code C123809.

A family of proteins that are expressed during viral infection, pathogen recognition or during interferon (IFN) treatment. These proteins are localized in the cytoplasm and contain multiple tetratricopeptide repeats; they are involved in antiviral immune processes.
