Thank you for giving me this opportunity. The article is well thought and really innovative. My notifications are the following:

1. abbreviations in the abstract should be clear
2. MBBS & BDS
3. what is the response rate in this study?
4. table 1: in covid vaccine doses the total is 97.5%. What is the rest?
5. Specific dates of data collection and the procedure should be included in the "materials and methods" paragraph
6. Is the risk ratio of infection still increased after the separation of each clinical year? This could be explained by the hours spent in the hospital (multivariate analysis needed?)
7. Separate paragraph with the limitations of the study
8. Conflict of interest at the end

This topic is really interesting. If the researchers think about these and the previous comments- notifications, their work will be even better.

Thank you.
