Hi,

This paper provides a very deep and interesting insight understanding of Baudrillard's theory, reality-systems and experiences transfer frameworks.

Perhaps the authors can also include eXtended-reality (XR) system in the picture as the system is rather more advance where the technology close up the reality experience dimension compared to AR, VR or MR. In addition, usually not only digital avatars plays a great role to define the realism. The experience machine would be the best focus as all sensory are involve. Unless author only focus on digital avatars application.

Author can also suggest in the conclusion, the limitation of technologies or strength of technologies in relation to Baudrillard's theory. In addition, what are the consequences of usage with examples of case studies.

In summary, this paper provide do provide in depth understanding of reality-systems with Baudrillard's theory. It will help readers to understand and provide a in depth dimension for better development framework or concepts.
