MLL/GMPS Fusion Gene

National Cancer Institute

Source

National Cancer Institute. *MLL/GMPS Fusion Gene*. NCI Thesaurus. Code C99325.

A fusion gene that results from a chromosomal translocation t(3;11)(q25;q23) which fuses either exon 7 or 8 of the MLL gene to nucleotide 150 of the GMPS gene. This rearrangement is associated with treatment-related acute myeloid leukemia.
