Congenital pericardium anomaly

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base*. [Congenital pericardium anomaly](#). ORPHA:2846

Congenital pericardium anomaly comprises a group of rare congenital cardiac malformations characterized by the complete (Congenital complete agenesis of pericardium) or partial absence of the pericardium (Congenital partial agenesis of pericardium), or by the presence of pericardial cysts (Pleuropericardial cyst) (see these terms).
