Abstract

The Abstract determines the manuscript's content and objectives in a very manifest and complete fashion.

1. Introduction

In p.1 a formal sourced definition of green agriculture should be furnished and a source for the OECD claim should be added. In terms of access to nutrient-dense food monopsony is also a danger.

Otherwise, very well written and quite comprehensive.

1. Agricultural Targets of Türkiye's National Climate Change Adaptation Strategy and Action Plan 2011-2023

Very detailed, objective and to the point. Try to avoid 'in conclusion' repetitiveness.

1. Environmental Outlook for Turkish Agriculture with Agricultural Statistics

A PCA of the components of Table 5.3 should be added, preferably using SPSS. A correlation between them and agricultural production as well as between the principal component and agricultural production should be carried out. Although correlation does not in general imply causation it will give food for more quantitative comments on results from processing the imported data.
