Potential competing interests: No potential competing interests to declare.

The presented work is just a descriptive idea about fault-tree and there is no dynamic presentation. Hence, I can't even evaluate this paper regarding its actual form, so, I suggest the authors organize their work well and focus on the novelty contribution, and putting some conjunctions links to test the effectiveness is not sufficient at all, I saw many comments on this paper, and I was shocked, how researchers can evaluate this work positively. Kindly rewrite this paper concisely and try to clarify the main contributions.
