N-Methyl-D-Aspartate Receptor

National Cancer Institute

Source

National Cancer Institute. *N-Methyl-D-Aspartate Receptor*. NCI Thesaurus. Code C118457.

A protein complex that plays a role in both NMDA binding and ion transport. It is a heterotetramer consisting of 2 glutamate [NMDA] receptor subunit zeta-1 proteins and 2 epsilon subunits (glutamate [NMDA] receptor subunit epsilon-1, -2, -3 or -4).
