Potential competing interests: No potential competing interests to declare.

Appreciation is addressed to the author for writing the article as part of World Peace Studies. The recent literature used in the article is relevant and up-to-date. It would be better if the literature were used to find the research gap and novelty and explicitly show them in the article. However, some notes can enhance the article. If the objective is to find a framework or model, some methods, such as interviews or observations, must be applied. Please associate the researcher's ideas and findings with prior studies in the results and discussion section. Novelty also needs to be written in the conclusion. Thanks for the authors' hard work on this study.
