Potential competing interests: No potential competing interests to declare.

The paper appears to lack sufficient focus on the problems related to architectural restoration. It currently reads more like a tourist information article rather than a scientific contribution. I recommend enhancing the depth of the discussion on architectural restoration and aligning the style more closely with the expected format for a rigorous academic work.

Furthermore, the keywords declared in the abstract, such as Soil Stabilization, Cement-Stabilized Base (CSB), Load-Bearing Capacity, and Sustainable Construction, do not seem to be adequately addressed in the content. I suggest incorporating more relevant information on these topics to fulfill the promises made in the abstract.

From a linguistic perspective, the quality of the English language does not meet acceptable standards. I recommend a thorough review to improve the overall clarity and coherence of the text.

I encourage you to consider these suggestions for revision to strengthen the scientific contribution of the paper.

Best regards,

Özgür BOZDAĞ
