Potential competing interests: No potential competing interests to declare.

Innovation point has not been highlighted in abstract and conclusion. Too much words for the background, goal and significance in abstract and conclusion, rather than the research work and results.

Design inputs have not been clarified, like ROV size, load carrying capacity/paid load, design velocity.

Structure should be described with sketch diagram not only a CAD model.

In a scientific article, research should be described objectively. First person perspective is not acceptable.

No any experiments results involved in, no any comparisons of design, theoretic, experiment. The given design has not been validated.
