Staphylococcus cohnii subsp. urealyticus

National Cancer Institute

Source

National Cancer Institute. *Staphylococcus cohnii subsp. urealyticus*. NCI Thesaurus. Code C124404.

A subspecies of *Staphylococcus cohnii* that is positive for urease, beta-glucuronidase, and beta-galactosidase activities, with delayed alkaline phosphatase activity and the ability to produce acid aerobically from alpha-lactose. This subspecies is most frequently isolated in homes and is only rarely encountered in the hospital setting.
