Review of the article submitted for evaluation

A current issue in urban development that is of great interest in the context of man and his environment, particularly the well-being and socialization of citizens.

Notwithstanding the fact that the data comes from a data bank, the parameters are well chosen. Study methodology appropriate and results well supported.

the inventory period seems rather remote to us, given the evolution of urban environments. In view of the results, the conclusion can be significantly improved.

the article seems to have a few typographical errors that need to be corrected, to make the text more readable.

The question I'm asking about nationality relates to origins and the age at which foreigners arrived in the greater Bretagnes area. If these cases are counted, the acquired knowledge or even habits of origin do not influence behavior.

On the whole, the article is of a value that authorizes its publication after minor alterations.
