**Potential competing interests:** No potential competing interests to declare.

I read with interest the manuscript entitled "The Uncertainty of Fairness: a Game Theory Analysis for a Debt Mutualization Scheme in the Euro Area. The issue examined issue ( how to insert fairness considerations into game theory) is quite interesting while the structure of the manuscript is fine and well discussed..

I do not have any major reservations, few minor points:

1) It is rather unusual to cite a textbook as a seminal ("some of the greatest") contribution to any discipline. I am referring to the "A primer in game theory" by Robert Gibbons.

2) Consistency is missing in the references' list. Remove the errors (Gibbons et. al) and give the full information for the citations used.

3) Do not take for granted that the general reader is familiar with the differences between advantageous inequality and disadvantageous inequality and why  $\alpha_i > \beta_i$ .

Otherwise, congratulations on this interesting paper.
