Abstract. Therefore, several groups of what? You have to clarify and specify. At the end of abstract there is a repetition and you have to delete the word lateral before L4-5 LLIF. Methods, patients aged 18 years or older who underwent MRI of what ?? Lumbosacral Spine. Results, this study included fifty patients instead of anatomical sites Introduction, there's a repetition and you have to delete Moreover, elements such as transitional anatomy to the end of paragraph. Also, the paragraph of Moro zone categorization has been used to the end. Inclusion, MRI of the lumbosacral spine you have to add. Results, table 2 type 2 is 9 and not 8 you have to correct as the sum of 35 plus 9 and 6 is 49 . Page 5, at the top of the page with type 3 anatomy (7/7) in contrary to table 2 (type 3 are only 6 patients). Page 7, there's a repetition and you have to delete from the anatomy of type 1 to the end of the paragraph. Page 8, lateral radiograph of the lumbosacral spine, page 9, you have to replace the word dislocation by displacement, my impression is positive as this technique is easy and feasible and provide us with a safe approach to a dark zone although it needs more evaluation and close monitoring of a wide range of patients in the future to guarantee its safety. With my best wishes
