**Potential competing interests:** No potential competing interests to declare.

This is a well-constructed article with a clear summary, proper introduction, and appropriate methodology that leads to theoretical and graphical results, along with precise discussions. As other reviewers have noted, grammar in English and, especially, the graphical aspect should be revisited. The maps are only done in a plan view. They are interesting and relevant, but the research could be enhanced with other graphical tools, ranging from different projections, not just the plan view, to photographs.
