

Review of: "Additive and Multiplicative Operations on Set of Polygonal Numbers"

Asim Patra

Potential competing interests: No potential competing interests to declare.

The manuscript is well-written and organized, and the work is also interesting, as the authors have tackled the generation of k-gonal numbers and deduced certain properties related to the numbers. But there are certain typos in the manuscript that must be rectified, and the manuscript must be proofread once again. Furthermore, the authors must add some motivation for their work.
