

Review of: "The Evolution of Consciousness Theories"

Sohail Adnan

Potential competing interests: No potential competing interests to declare.

Of all the theories that are explained in this paper, they are mainly philosophical. These are a few. In fact, the more convincing theories are electromagnetic field theories of consciousness that genuinely explain where we actually feel ourselves. In this regard, I can suggest taking a look at the "CEMI Field theory" presented by Johnjoe McFadden, "The integrative brain theory" (that I published in the Journal of Consciousness Exploration and Research), and "The electromagnetic field theory of consciousness" by Susan Pockett.

With best wishes,

Sohail Adnan
