Hi,

Herewith i am writing a review about the article, [Implementation of e-learning during COVID-19](#).

This article have written in an well established way. Literatures have been given aptness to the study.

A small suggestion is given to the author that

The article was done using empirical research. It would be fine that if it is done using Descriptive research stating the presnt scnario very well. Also statistical proof could be added to give a better reliability and validation to the paper. Recommendations could be more precise and quantitative . Some more recent literatures could be added.

Congratulations for the effort in writing this paper.

regards

Rathika.S
