# Id MM Vaccine Test

National Cancer Institute

## Source

National Cancer Institute. *Id MM Vaccine Test*. NCI Thesaurus. Code C29111.

A test consisting of a myeloma idiotype (Id)-specific protein conjugated to the immunogen keyhole limpet hemocyanin (KLH). As a test of innate host delayed-type hypersensitivity (DTH) and host DTH in response to therapeutic vaccination, Id MM vaccine test is performed intradermally before and after therapeutic vaccination in multiple myeloma patients treated with Id-specific vaccines. (NCI04)
