Review of: "Generalized Inverse Preservers of Hadamard Circulant Majorization"

Xingping Sheng¹

1. School of Mathematics and Statistics, Fuyang Normal University, Fuyang, China

In this paper, the authors obtain several linear transformations, such as T^* , T^d , $T^\#$ and T^+ , all of which preserve Hadamard circulant majorization. The results are correct and interesting. The paper is good for the content of Qeios. I recommend the manuscript for publication in Qeios.
