Potential competing interests: No potential competing interests to declare.

The author presents a unique nexus of Anthropocene effect on the Kali Eagles proliferated by COVID19. However, the paper has limitations that can be improved further:

- The abstract lacks the exact findings rather generalized narration. Incorporation of findings and summary methodology is salient to improve the draft.
- The method is presented as "results & discussion" the author tend to pre-empt the findings before pinning the discussion. An example "At the time of maximal sightings, the Kali was seen sunning on a ridge near the Baroro delta that is tucked in between human settlements and farms. On 22 January 2022, a brood of eighteen (18) Kali individuals was seen on this ridge. For the recording period, this was the greatest number of Kali individuals sighted in the area." - The methodology should present the indicative research process rather forthwith findings. This statement negates the reader to discussion rather methodology.
- Presented analytical data in the method sub-section should be presented as discussion or findings rather as a method.
- The references are so limiting. The author should explore & utilize more citations from other scholars.
- The discussion is too brief unlike compared to the method. More findings & discussions could elucidate for this interesting study.
