# AVP wt Allele

National Cancer Institute

## Source

National Cancer Institute. *AVP wt Allele*. NCI Thesaurus. Code C52392.

Human AVP wild-type allele is located in the vicinity of 20p13 and is approximately 3 kb in length. This allele, which encodes vasopressin-neurophysin 2-copeptin protein, is involved in the mediation of a wide variety of bodily functions. Mutations in the gene results in autosomal dominant neurohypophyseal diabetes insipidus.
