

Review of: "[Review Article] Green Strategies for the Synthesis of Quinolone Derivatives"

Mustafa M. Kadhim¹

¹ University of Baghdad

Potential competing interests: No potential competing interests to declare.

I would like to point out the notes listed below after reviewing the paper:

1. The review paper focuses on reducing the energy required to develop desirable products and reducing or stopping the synthesis of hazardous by-products to minimize any environmental or health impact.
2. Overall, the subject of the paper is original and consistent with recent international research trends.
3. The language in which the research paper is written seems fairly good.
4. The number of citations to newly published research (during the last three years) is small relative to the total number of references used in the research paper.
5. Finally, after reviewing this paper, I would like to recommend it for publication.

With my sincere wishes,

Dr. Mustafa M. Kadhim
